Task 1: Introduction to Unity 6 with VR

The primary goal of this course is to help you create an impressive portfolio that stands out on your CV. It's essential that your work is original and unique, so embrace your creativity!

Overview

In this task, you will learn how to develop a Virtual Reality (VR) game using Unity 6. Follow the steps outlined in the video tutorial titled **"How To Make A VR Game in an Hour Using Unity 6"**. This guide will walk you through downloading Unity 6, getting started—even if you are a beginner—utilizing the OpenXR SDK, and exploring the necessary toolkits for VR simulation and interaction.

Important Note

Please adhere closely to the video instructions. Avoid shortcuts, such as replacing the standard project with VR projects, as this may hinder your learning experience.

Submission Objectives

1. **Interaction Modules Testing**
   Test out the various interaction modules demonstrated in the course. Document your findings and comments based on the concepts covered in previous lectures.

2. **3D Model Generation**
   Use an AI tool to create a 3D model. Once generated, upload your model to Mixamo to apply animations. Be sure to mention which AI tool you used for model creation.

3. **Model Import**
   Import the animated model into your Unity project.
4. **Environment :** Utilize existing assets from Unity asset store (free not paid) to create the surrounding word.

5. **Video Documentation**
   Record a video showcasing your complete scene and the interactions available in

your VR game.

6. **Submission Details**

- **Deadline:** Sunday, March 8th
- **Discussion Date:** Monday, March 9th
- **Grade Weight:** 10%

Academic Integrity

Please remember that plagiarism rules apply. Ensure that your work is your own and properly credited.
